

Attorney Docket No. P12091

**AMENDMENTS TO THE SPECIFICATION**

Please amend the Abstract as follows:

Sammendrag Abstract

~~The present invention relates to an arrangement and a method for providing fax service for mobile networks. Fax messages are transported over an additional IP layer in the mobile network. The messages are mapped onto TCP or UDP packets, which in turn are mapped onto RLP frames for transport on the mobile network. A system, mobile fax terminal, and method for providing fax service for mobile networks. A fax adapter receives fax data from a fax machine via standard fax protocols, maps the fax data onto Transmission Control Protocol (TCP) or User Datagram Protocol (UDP) packets, and sends the mapped data over an Internet Protocol (IP)-based interface to a mobile phone portion. The mobile phone portion maps the TCP or UDP packets onto Radio Link Protocol (RLP) frames, and transmits the RLP frames to an external radio telecommunication network.~~

The rewritten Abstract is attached hereto on a separate sheet.
